Art Unit: 1711

## **DETAILED ACTION**

The following is an examiner's statement of reasons for allowance: The present invention is directed to a method of creating a malleable, biocompatible polymer material for the repair or replacement of tissue, by centrifuging a slurry of polymer fibers so as to cause said polymer fibers to migrate through the suspension fluid and amass at a furthest extent of the vessel, forming a polymer material in which the polymer fibers are interlaced and interlocked to retard dissociation of said polymer fibers upon contact with a fluid. The invention is further related to a malleable, biocompatible polymer material for the repair or replacement of tissue which the polymer fibers are interlaced and interlocked to retard dissociation of said polymer fibers upon contact with a fluid. While the prior art of record discloses a method similar to the claimed method, the closest prior art reference, US Patent 6,179,872 to Bell et al., discloses use of polymer fibrils, rather than fibers. In the affidavit submitted by the applicants on March 7, 2005, applicants described the differences between "fibers" and "fibrils". The re is no motivation to substitute fibrils disclosed in the reference with polymer fibers, and, in view of the differences between fibers and fibrils as discussed by the applicants, the invention that requires the presence of polymer fibers, rather than fibrils, is considered to be unobvious from the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Application/Control Number: 10/601,216
